

JUST ORGANIZED— KLEBERG COUNTY OIL & GAS COMPANY

KINGSVILLE, TEXAS

THE TRUSTEES AND OFFICERS—

The Trustees and Officers of this Company are all prominent business men of Kingsville, men who have been successful in the management of their respective enterprises.

H. C. Dennett, president, is vice-president and manager of the Kingsville Commission Company.

J. C. Nolan, vice-president, is superintendent of the Gulf Coast Lines Railroad. E. L. Clark, secretary and treasurer, is secretary of the Kingsville Land and Investment Company.

Chas. H. Flato, trustee, is manager of the Kingsville Land and Investment Company.

J. F. Ivey, trustee, is of the Ivey-Madeley Grocery Company.

Chas. H. Flato, trustee, is vice-president of Robert J. Kleberg and Company, Bankers; vice president of the Kingsville Lumber and Hardware Company and of the John B. Ragland Mercantile Company. Mr. Flato is also president of the State Lumberman's Association.

Ben F. Wilson, trustee, is County Judge of Kleberg County and is in the Cotton Brokerage business.

C. M. Allen, trustee, is manager of the Jordt-Allen Furniture Company of Corpus Christi and Kingsville.

Marcus Phillips, trustee, is secretary of the Commercial Club. Sam Sellers, trustee, is manager and largest stockholder of the W. T. Sellers Grocery Company.

These men guarantee you a square deal in the company. They have bought stock and have paid dollar for dollar for it. They have not and will not receive any promotion stock.

4000 ACRES

THINK OF IT! Think what an investment of \$100.00 in this company, if oil is found means! We believe we have the oil on our land. We want to put this proposition over in record time. Everybody in the Gulf Coast section from Corpus Christi to Brownsville, and to McAllen and Mission, is interested in the development of South Texas oil fields. The sooner a sufficient amount of stock is sold to insure the drilling of the first well the sooner the well will be started. Don't delay. If you have any questions to ask, before investing write us. We shall be glad to mail you our prospectus with maps showing our acreage in detail and the general contour of the country. Subscribe for yours now. Let's put it over in a hurry. We will sell a part of this stock on partial payments.

SUBSCRIPTION FOR STOCK

KLEBERG COUNTY OIL & GAS CO.,

Kingsville, Texas.

Gentlemen:

Enclosed find check for \$..... for which enter my subscription for shares (par value \$10.00 each) in the Kleberg County Oil & Gas Company.

Make all checks payable to the Company

Name

Address

OUR GUARANTEE—

We cannot guarantee, of course, that oil will be found. We do guarantee, however, that your money will be honestly and judiciously spent in an earnest and diligent effort to develop this field and produce oil. No contracts are to be entered into or indebtedness incurred, until a sufficient amount is in the treasury and available to complete the first well. Just as soon as this amount is available drilling operations will commence.

OUR PLAN—

We have placed \$50,000 stock on the market at par and will guarantee to drill a well at least 3500 feet, if necessary to secure oil and this we propose to do without delay. We propose to develop this four thousand acre lease by making deep test wells.

ATTRACTIVE FEATURES—

Our proposition will appeal to you because—

We have 4,000 acres of land well distributed which we have leased without cost to the company, except the usual one-eighth royalty to owner.

The Capital Stock is only \$100,000, divided into shares of \$10 each—non-assessable and transferrable.

Absolutely no promotion stock and, no salaried officers, each shareholder stands to share the profits and losses alike.

Each shareholder has a pro rata option on all unsold stock when drilling begins.

GEOLOGICAL INDICATIONS—

By referring to a map on our prospectus, you will find that our holdings are located between the Jarachinal and Santa Gertrudis and San Fernando creeks and Cayo del Grullo, which is an inlet from Baffin's Bay and the Gulf of Mexico. A well-known geologist has stated that a third group of salt domes is indicated for San Patricio, Duval, Brooks and Kleberg counties. Large deposits of gypsum are found along the Santa Gertrudis, San Fernando and Jarachinal creeks. Limestone outcroppings, on very pronounced domes and elevations, as well as gas wells, sulphur water, fossils, and several distinct gas blow outs, with pieces of asphalt are found in this immediate section of Kleberg county. Baffin's Bay, southeast of our tract, is said to be the third saltiest bay in the United States. A representative of one of the largest companies while making a survey of our field recently declared that it was his theory that this bay was so briny because under the waters of the bay there might be some salt domes exposed. It is not an inland bay, as it has an outlet into the Laguna Madre and thence into the Gulf of Mexico. We have 400 acres located next to the well-known Rosse tract, where a well was sunk 1300 feet and twisted off in blue gumbo, after going through blue, green and grey formations, sulphur water, gas, domonitic rock and traces of lignite. Large cracks or fissures in the earth, and other favorable signs, are noticeable in places about one mile north of the Texas-Kentucky derrick and two miles south and southwest. Oil men advise that these cracks are either caused from escaping gas or from hot sulphur beds under the earth. These cracks are only noticeable in certain areas and invariably run northwest and southeast.

It is well known that the large companies are seeking a large pool of oil between White Point, north of Corpus Christi, and Brownsville, on the Gulf Coast. One of the largest gas fields in the world was discovered at White Point several years ago. The Empire Oil and Gas Co., have leased thousands of acres in Kleberg county, in fact, they have the whole county checkerboarded, and some of the other large companies are negotiating for leases here. Several operators who have been in the Tampico field, who have studied the coast line, say that our holdings resemble the Tampico fields more than anything they have seen. Surface or shallow production is found in Duval county only 30 miles northwest of us. By looking at the map you will find that all creeks in this section run from northwest to southeast, and the dip in the coast country runs from northwest to southeast. Professor Udden, head of the Bureau of Technology and Geology of the University of Texas, reports large gypsum deposits in Brooks county, and we have them in Kleberg county, because we can show them to you. A decided fault in the structure and several apparent upheavals are found on our holdings.

WE WILL TAKE YOUR LIBERTY BONDS AT PAR
